

Model: EB
(Eye Brow)

General Specifications:

The Eye Brow (EB) model hood is a heat removal hood. The hood shall be fabricated from type 430 stainless steel. Type II hoods are used over non-grease producing equipment only and are not required to meet NFPA 96 standards. The normal calculation for air flow for this model is calculated at the rate of 50 CFM per foot exhaust. It is recommended to allow for a 6" overhang on the front, back, and sides of the hood. EB hood duct should be made of non-corrosive material. Exhaust collar shall have a 3/4" flange for easy field connection.

Complete computer generated submittal drawings including material type, hood section view(s), plan view(s) and options chosen shall be provided. Duct sizes, CFM requirements and static pressures shall be shown on drawings. The hood shall be NSF Listed and bear the NSF Seal of Approval. Hood to be manufactured by LARKIN INDUSTRIES, INC. 1-800-322-4036

Optional Features:

- Remote mounted electrical controls
- Enclosure panels
- End panels
- Wall splash panels
